< Summary >

“ILSI Europe BRAFO Risk-Benefit Analysis of Foods Workshop on Case Studies” was held in Brussels on October 29th and 30th, 2009. The BRAFO project started on 1st September, 2007 and intended to run for 40months until December 2010. The project is consisted with 8 work projects including the steering committee (WP2), which is designated to provide scientific and management support. The objectives of the project are to establish a common scale of measurement for comparing risk and benefits of food and food components present in the diet, to present and review the applicability of the BRAFO methodology through the application of case studies and to harmonize the different approaches. This workshop focused on the results of case studies through WP3 methodologies. Additionally they tried to identify the common core elements, similarities and differences, and to adjust the model/methodology according to the outcomes of the case studies.
